

Amaury Gómez

Senior Full Stack Engineer · .NET / React / SQL Server

I own features end to end: SQL schema and stored procedures, the .NET API, the React or Angular front end, and deployment.

11+ years in production · Telecom · Government · Banking · Remote, UTC-4 · ES / EN
Santo Domingo, DR · hello@amaurygomez.dev · amaurygomez.dev · github.com/amaurygomez

PROFILE

Full stack engineer with 11+ years building and maintaining production systems for telecommunications, government and banking. My main stack is C#/.NET, React/TypeScript and Microsoft SQL Server, with Oracle and Angular on long-running systems. Most of my work supports daily operations: integrations with third-party and government APIs, internal tools for sales, support and operations teams, and automation that replaces manual steps. Much of that happens inside legacy systems that cannot be taken offline.

EXPERIENCE

The two longest roles ran in parallel. Organization and school names and exact dates are in the full CV, available on request at amaurygomez.dev/cv.

Senior Software Developer

Telecommunications carrier · 8+ years

Modernized legacy applications without interrupting 24/7 operations, using GitLab CI/CD and Dockerized services.

- Built the coverage map for fixed and mobile services embedded in the CRM so sales and support know what can be offered in each zone. It pulls zone data from the network vendor's platform API, keeps geospatial data in Oracle behind a .NET Core API, and renders it in Angular with Google Maps.
- Reduced Google Maps API cost by optimizing how the map runs searches and handles user interactions.
- Built a geospatial tool (Leaflet, Google Maps) to draw, calculate and quote network sections by antenna and urban zone.
- Built the quality department's monitoring platform: screen and voice capture (FFmpeg), a REST API, and live per-agent traceability.
- Delivered internal apps across several departments: process automation, workflows, surveys, auctions and audio/video streaming, plus the Asterisk IVR options-registration module.

Stack: C# · .NET / .NET Core · ASP.NET · Angular · React · Oracle (ODP.NET) · SQL Server · SignalR · Google Maps API · Docker · GitLab CI/CD

Full Stack Developer (Contractor)

Government agency · concurrent contract · 8+ years

Developed and maintained the background-check platform and related internal systems, running in a restricted environment over sensitive data.

- Built the middleware that fronts other institutions' identity and fingerprint APIs, with a local cache that keeps the platform answering when those services are down.
- Implemented authentication and per-profile permissions (ASP.NET Core Identity, JWT) so every read of a sensitive record is attributable and auditable.
- Designed SQL Server schemas, stored procedures, triggers, views and functions, and optimized queries; used Redis for caching and SignalR for real-time updates.
- Built React and Angular front ends: admin modules, case-status dashboards, internal HR tools, and live operational and statistical maps by province, municipality and sector.

Stack: C# · ASP.NET Core · ASP.NET Core Identity · JWT · LINQ · AutoMapper · Swagger / OpenAPI · React · Angular · TypeScript · SQL Server (T-SQL) · Redis · SignalR · Jira · Bitbucket

Java Developer

Regulated financial institution · 2 years

Built and maintained the mortgage CRM and loan management system end to end, taking loan applications off paper and automating earnings estimates.

- Built a loan-calculator application and APIs for external clients.
- Built the daily JasperReports reporting for bank operations and the Windows batch automation that replaced manual processes and resolved user collisions on shared network files.

Stack: Java EE · JSF · PrimeFaces · Hibernate · GlassFish · JasperReports · SQL Server · Windows batch

Full Stack Developer

POS and transaction software company · 1 year

Built mobile top-up and lottery transaction flows, including a Java ME app for Verifone and Android POS terminals.

- Optimized the Java socket service that POS terminals called on every transaction, so response times held under peak load.
- Built an ASP.NET CRM with a SOAP API for clients and supervisors and an admin panel, on .NET Framework 3.5 with WinForms tools and Crystal Reports.

Stack: Java · Java ME · Android · Verifone · Sockets · ASP.NET · SOAP · WinForms · .NET Framework 3.5 · SQL Server · Crystal Reports

SKILLS

Programming languages	C# · TypeScript · JavaScript · SQL (T-SQL) · Java · Python
Backend	.NET / .NET Core · ASP.NET Core Web API · Entity Framework Core · LINQ · SignalR · AutoMapper · REST · SOAP · Java EE
Frontend	React · Angular · Blazor · Tailwind CSS · Leaflet · Google Maps API
Data	Microsoft SQL Server (schema design, stored procedures, triggers, query tuning) · Oracle (ODP.NET) · Redis · MySQL · Azure SQL
APIs & security	Third-party and government REST/SOAP APIs · Middleware services · ASP.NET Core Identity · JWT · Per-profile permissions · Audit trails · Swagger / OpenAPI
Practices	Code review · Unit and end-to-end testing · Scrum / Kanban · Technical documentation
DevOps & cloud	Docker · GitLab CI/CD · Azure DevOps · Git · GitHub · Bitbucket · IIS · Windows Server · Linux · AWS (EC2, S3, Amplify) · Azure · Firebase

PROJECTS

AG World · github.com/amaurygomez/amaurycv

This site: Astro with React islands, an isometric world in PixiJS, a CV page that prints its own PDF, and full-CV delivery through an encrypted serverless endpoint.

Self-hosted LLM stack

Models served by Ollama behind LiteLLM routing, with Qdrant retrieval, Langfuse tracing and n8n automations.

EDUCATION

Associate degree in Software Development

Dominican Republic · Completed

Computer Science Engineering

Dominican Republic · In progress

Languages

Spanish (native) · English (professional working proficiency)

Certifications

Application Development using Microservices and Serverless · IBM · 2024

Container & Kubernetes Essentials · IBM · 2024
