

Amaury Emmanuel Gómez Rodríguez

Senior software engineer from Santo Domingo, Dominican Republic, with 13+ years connected to technology and 9+ years professionally building, modernizing, and maintaining enterprise platforms in real operational environments. Experience spans telecommunications (coverage maps, CRM-embedded geospatial tools, voice recording and live monitoring), banking (loan workflows, JasperReports, .bat automation), confidential public-sector platforms (identity, audit, live operational maps, statistical dashboards), and transactional/POS systems (Android POS, Verifone, Java ME, sockets, legacy ASP.NET/WinForms). Specialized in .NET, React, Java, Oracle, SQL Server, geospatial libraries, APIs, legacy modernization, and AI-assisted engineering with human review.

Experience

Senior Software Engineer · Telecommunications · Telecommunications carrier (name withheld for confidentiality)

Extended tenure · 24/7 operations

Build and maintain internal enterprise software supporting sales, support, network planning, and quality monitoring teams. Focus on coverage-aware CRM tooling, geospatial planning, voice/screen recording, and live monitoring of representative–customer interactions.

- HFC, fiber, 2G/3G/4G/5G coverage map embedded into CRM so sales and support know what can be offered by zone.
- Geospatial tool to draw, calculate, and quote network sections (tramos) by antenna and urban zone.
- Screen and voice recording platform for representatives with live monitoring and per-agent traceability.
- IVR/Asterisk options registration module for phone-attention flows.
- Legacy modernization preserving 24/7 operational continuity; CI/CD on GitLab; Dockerized services.

Developer / Consultant · Confidential Public Sector · State institution (generalized for confidentiality)

Extended tenure · confidential environment

Develop and modernize operational platforms in a secure institutional environment. Specific systems, infrastructure, endpoints, and procedures are intentionally generalized due to the sensitive nature of the work.

- Backend integrations with multiple institutional APIs and external services.
- Identity, per-profile permissions, audit trails, and traceability over sensitive data.
- Live operational maps and statistical maps by province, municipality, and sector.
- Decision dashboards, admin modules, and internal HR tooling.
- Progressive modernization without breaking availability or critical operational behavior.

Java Developer · Banking · Regulated financial institution (name withheld)

Multi-year chapter

Internal banking software with enterprise Java and operational automation.

- Built and maintained end-to-end loan workflows.
- Modified and maintained JasperReports used daily across banking operations.
- Windows .bat automation to resolve user collisions over shared network files.
- Integrations with internal services and support over transactional data.

Full-Stack Developer · POS & Transactional · Software & network-operations company (name withheld)

First professional chapter

First formal job at a small software and network-operations company building transactional systems, mobile POS, payment terminal integrations, and legacy enterprise apps.

- Android POS systems and Verifone payment terminal integrations using Java ME.
- Mobile recharge and lottery transactional flows.
- Java socket communication and internal Java APIs.
- Crystal Reports reporting plus legacy ASP.NET / WinForms apps on .NET Framework 3.5.

Stack

BACKEND & ENTERPRISE

C#, .NET Framework, .NET Core, ASP.NET, ASP.NET Core, Blazor, Java, REST APIs, SignalR, JWT · Identity, Audit logging

DATABASES & DATA

SQL Server, Oracle, LINQ, LINQ DB, EF Core, Query optimization

DEVOPS & DELIVERY

GitLab, GitHub, CI/CD, Docker, IIS, Vercel

AI OPERATIONS LAB

n8n, Qdrant, LiteLLM, Ollama, Open WebUI, Langfuse, Docker Compose, SearXNG, Codex CLI, Claude Code CLI, Evals

Education

Engineering in Computer Science · University program (institution withheld) · Ongoing studies

Software Development Technologist path · Technical institute (institution withheld) · Early technical training

FRONTEND & UI

React, TypeScript, JavaScript, Angular, Blazor UI, Tailwind CSS, Bootstrap, jQuery

MAPS, REAL-TIME & OPERATIONS

Leaflet, Google Maps, SignalR, Redis, Live ops dashboards, Statistical maps

REPORTING & LEGACY

JasperReports, Crystal Reports, Windows Server, .bat automation, WinForms, Java ME, Verifone, .NET Framework 3.5

Certifications

DevOps, Cloud, and Agile Foundations

Application Development using Microservices and Serverless

Container & Kubernetes Essentials

Git and GitHub Essentials

DevOps Essentials

Cloud Computing Foundations

Linux Commands & Shell Scripting Essentials
